

MICHAEL MASON

me@mikemason.dev | www.mikemason.dev | 508 215 8240

FULL-STACK SOFTWARE ENGINEER | SOLUTION ORIENTED | COLLABORATIVE

Software Engineer with a B.S. in Computer Science and hands-on experience building, containerizing, and deploying scalable applications across multiple languages and frameworks. Proven track record of leveraging data-driven problem solving within high-volume financial services environments. Strong foundation in relational databases, Linux systems, and secure API design. Known for his excellent communication skills and providing efficient and comprehensive customer service and technical support.

PROFESSIONAL EXPERIENCE

Technology Work:

FIDELITY INVESTMENTS, Merrimack, NH

2024 – PRESENT

Financial Customer Associate II

Member of a fifteen (15) person team that resolves customer issues and technical support requests on pension and 401(k) plans for an assigned set of employers. Utilize an internal request workflow to facilitate rapid response and resolution for service requests and processed high precision transactions and pension initiations.

Key Accomplishments:

- Acted as point of contact for team's 401(k) requests, ensuring completion within SLA and handling escalated and complex situations
- Mentored teammates in methods to better support participants' technical needs, including the use of web development tools to simulate a participant's device
- Maintained a 100% safeguard rating, through strict adherence to compliance standards and a focus on accuracy
- Received a 100% quality review on a monitored call after the quality team found no imperfections. The call was shared with the team as a "best practice for development".

INDEPENDENT TECH PROJECTS:

Novel Outliner (<https://github.com/masonmike2001/novel-outliner>)

2026

Created and deployed a Spring Boot web application designed to assist in the novel creation process, using modular story structures via REST API to determine optimal word counts for each story segment.

- Designed and containerized a dual-PostgreSQL instance architecture using Podman, decoupling static story schemas from temporary session data to enforce strict data isolation
- Built and documented secure endpoints using Spring MVC to handle session-parameterized payloads, ensuring optimal data mapping and preventing data leaks
- Integrated Thymeleaf to dynamically compute and render complex chapter structures, utilizing relational database queries to inject algorithmic word-count targets in real-time

MICHAEL MASON

Astrollama (<https://github.com/masonmike2001/astrollama>)

2026

Developed an offline Obsidian plugin with Typescript to fully utilize local artificial intelligence models by interfacing with the Ollama API, allowing for conversations and generation within the context of a user's notes.

- Designed plugin architecture integrating Obsidian event lifecycle with local LLM inference (Ollama API) for offline AI processing
- Built prompt workflow engine supporting structured markdown generation, rewriting, and note augmentation
- Engineered local-first design eliminating external API dependency, improving privacy and reducing latency

OTHER WORK:

BREWSTER AMBULANCE, Worcester, MA

2022 – 2024

Emergency Medical Technician

Responded to calls for emergent medical issues and provided exceptional medical care and support in a high pressure and stressful environment. Liaised with patients, bystanders, and medical professionals to facilitate improved medical outcomes, and mentored new EMTs in best practices for documentation and medical care.

EDUCATION AND CERTIFICATIONS

Western Governors University, Salt Lake City, UT

2025

Bachelor of Science (BS), Computer Science

University of Massachusetts, Lowell, MA

2023

Bachelor of Science (BS), Exercise Science

Certifications: ITIL 4, LPI Linux Essentials

SKILLS

Languages: Java, SQL, Python, Typescript

Frameworks & Libraries: Spring Boot (MVC, Data), Thymeleaf, Flask, React

Tools & Databases: Podman, Docker, Git, Postman, PostgreSQL, Fedora Linux

Concepts: REST APIs, CI/CD, Unit Testing
